

## Specifications for Paraffin Wax

| Parameter                       | Value  |
|---------------------------------|--|
| Molecular Formula               | ---  |
| Mol Wt                          | ---  |
| CAS #                           | [8002-74-2]                                  |
| Description                     | White translucent waxy odourless smooth mass |
| Solidification point in deg cel | 58-60  |
| Sulphated ash (%)               | 0.1 max                                      |
| Oil Content (wt%)               | report                                       |

## Uses

| Industry     | Application  |
|--------------|--|
| Paper        | In mfr of paraffin paper and candles<br>In water-proofing of paper |
| Wood         | In water-proofing of wood and cork                                 |
| Coating      | In manufacture of varnishes  |
| Floriculture | In extracting perfumes from flower                                 |
| Cosmetics    | In cosmetic formulations   |
| Pharma       | As stiffening agent in formulations                                |
